**DETAILED ACTION**

***Election/Restrictions***

1. Applicant's election with traverse of Group I and Species II in the reply filed on 11/03/2008 is acknowledged. The traversal is on the ground(s) that the examiner has not shown that a serious burden would be placed if Groups I and II were to be examined together. This is not found persuasive because the inventions require a different field of search (searching different classes/subclasses, electronic resources, and employing different search queries) and the prior art applicable to one invention would not likely be applicable to another invention.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. **Claims 1, 2, 3 and 13** are rejected under 35 U.S.C. 102(b) as being anticipated by Rosheim et al., US Patent 4,911,033

Rosheim et al. discloses a remotely actuated robotic wrist (Fig. 2A), comprising a(n):

*Re claim 1*

- Distal element (13)
- Orientable support (43) integral to said distal element
- Fixed member (at 24) having a pivot (Fig. 4) about which said support is capable instantaneously to rotate (C4 / L55-68; C5 / L1-9)
- Remote means (66, 68) with respect to said distal element for creating at least two independent forces suitable for causing said support to move with respect to said pivot according to at least two independent directions (C7 / L1-20)
- Deviating means (60, 61) said at least two forces so that they are applied to said support according to two predetermined positions (C7 / L1-20).

*Re claim 2*

- Support being capable instantaneously to rotate with respect to said fixed pivot so that said support has at least two degrees of freedom with respect to said fixed pivot (C4 / L55-68; C5 / L1-9).

*Re claim 3*

- At least two forces (C4 / L55-68; C5 / L1-9; C7 / L1-20) are applied to said support through means selected from the group:
  - At least one pulling element, in particular a tendon.
  - At least one stiff stick (C7 / L4-7) in order to act as pulling element and as pushing element.

*Re claim 13*

- Mechanism equivalent to two spheres (24, 43), or portions of sphere, rolling on each other (C4 / L55-68; C5 / L1-9), wherein said fixed pivot is located at the centre of the first ball and said deviating means provide an arm rotatable (13) about said pivot and connected to the centre of the second sphere (Fig. 2A, 2B), as well as provide said rolling contact between said spheres.
